

BEWARE the carbon footprint con job!!

please read the other side

DON'T FALL FOR THE CON JOB!

Here is the truth about climate change :

1. Earth's climate is always changing.
2. Current climate change is in no way abnormal or dangerous.
3. Carbon dioxide is a natural and beneficial gas, not a pollutant. More carbon dioxide in the air would be a boon to life on Earth because all plants thrive on it.
4. The amount of carbon dioxide we produce by burning coal, oil and gas is less than one twentieth of that produced in nature –much being released by living things (including humans) as they breathe/respire.
5. Atmospheric gases do affect climate, but the effect of man's emissions of carbon dioxide is miniscule and swamped by the effects of the sun, water vapour, cosmic rays, clouds, volcanoes and currents in the air and sea.
6. If the global climate was warmer by a few degrees (as it has been in the past), mankind would benefit and other living things would readily adapt.
7. Many independent scientists and economists are challenging the myths put out by alarmists like The International Panel on Climate Change, Al Gore, Tim Flannery and our local politicians, but these contrary views are being suppressed.
8. Unless we all become aware of the truth and reject the lies, the big 'con job' will continue at huge cost to our economy and to every individual Australian.

What are their motives for misleading us?

- **the United Nations** wants to establish a global government that will be able to dominate both developed and developing nations by controlling their energy production and use.
- **environmental extremists** want to suppress development and industry and thereby, the quality of human life throughout the world.
- **multinational companies and speculators** want to get richer at our expense by buying and selling carbon credits and/or investing in renewable energies with the aid of huge government grants.
- **scientists with vested interests** want to hold their government funded jobs, get more research grants and/or advance their careers.
- **politicians** need support of 'the greens' to gain, or stay in, power. They also realise they can use the climate change scare to improve their election chances and also to justify big increases in taxes and in the price of essentials like water, electricity and fuel.
- **the media** benefit from alarmist headlines and environment reporters need to continue the 'hype' if they are to justify their positions.

Please pass this on to others.
